

## International (Senior) Migration Consultant

Anubex is a Belgian ICT company and technology visionary active in cross-platform migrations of large mission-critical software applications. Anubex specializes in the creation of migration tools that automate the conversion or re-hosting of software applications on a variety of "legacy" platforms to open systems (potentially running in the Cloud), or mainframes. Anubex also provides migration services to its customers and supports a growing international network of partners that accommodate their own customers with the help of our technology solutions and expertise.

To strengthen our Migration Implementation Team (which runs our projects), we are currently looking for a (Senior) Migration Consultant.

### Responsibilities:

The main responsibility is to:

- Be the focal technical point of contact at the customer, representing Anubex and moving the project forward by eliminating any technical obstacles;
- Transform customer code to Java/C# using CodeTurn;
- Convert customer data structures and data to RDMBS using DataTurn;
- Occasionally develop custom software for the ongoing projects;
- Deploy applications to client systems, including release notes + test reports;
- Detect, analyze and report problems in tests;
- Suggest product enhancements to the Anubex R&D department;

In this role you regularly visit our customers, located geographically all over the world, typically for a longer period of time.

In this role you work closely together with one of our Project Managers.

### Job profile:

Requirements:

- Knowledge of and experience with programming languages (COBOL, Java, and/or C#);
- Knowledge of and experience in scripting languages (e.g. Python, Bash or Perl);
- Knowledge of and experience with SQL;
- Good verbal and written communication skills;
- Customer focused, constructive and pragmatic;
- Fluent in English;
- Willing to travel regularly – at least 50% of the time;

Assets:

- Knowledge of either German, French, Spanish.
- Knowledge of and experience with DevOps tools (e.g. Jenkins, Git, Docker, ...)
- Knowledge of and experience with (private) Cloud Platforms (Azure, AWS, ...)
- Relevant experience in the (automated) legacy modernization market;
- Knowledge of and experience with typical development tools (build tools, version-control-systems, ticketing systems, ...);

**What we offer:**

- A positive atmosphere in an international and growing company;
- A dynamic team having a pool of expertise in a variety of technologies;
- A high degree of autonomy and flexibility including flexible hours, home office, extra leave, career planning and training;
- A competitive salary completed by additional benefits such as representation allowance, group insurance, medical insurance, meal vouchers, laptop and mobile.
